SUMMARY

Computer Science graduate (Full Sail University, expected September 2026) with hands-on experience building Android applications, systems-level C++ software, and networked applications - plus five years building internal data tooling and process systems in a high-volume logistics environment. Fluent across Kotlin, C++, Python, and Java.

SKILLS

- Languages: C++, Python, Java, Kotlin, SQL
- Tools: Git/GitHub, Visual Studio, Android Studio, Windows/CMD
- Testing: Unit testing for software and embedded/hardware systems
- Networking: TCP/UDP socket programming, client-server architecture
- APIs & Integration: REST API integration, LLM integration (Ollama, OpenRouter)
- Android Development: Android Studio, Retrofit, Room, MVVM, Navigation Component
- Machine Learning: KNN, Naive Bayes, Random Forest, Ridge Regression, clustering (scikit-learn); neural network fundamentals (NumPy/SciPy)
- Data Analysis & Visualization: Pandas, NumPy, SciPy, Matplotlib, Seaborn, Plotly, Jupyter Notebook
- Systems & Graphics: OpenGL, GLFW/GLAD, shader programming, VAO/VBO architecture

EXPERIENCE

Senior Operations Administrator

September 2021 - Present

FedEx- Columbia, SC

- Developed and deployed an internal template that reconfigured incoming operational data into a standardized format for automated printing on delivery records.
- Designed cross-reference workflows to match undeliverable packages with the intended recipients, and analyzed recurring address-data issues to reduce repeat errors for frequent customers.
- Served as shift's sole certified Dangerous Goods Specialist, maintaining and ensuring procedures complied with IATA and TSA regulations for hazardous materials processing within a TSA facility.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Computer Science (B.S.)

September 2026

Full Sail University, Winter Park, FL

Certified Dangerous Goods Specialist (IATA/TSA Regulations.)

PROJECTS

MedMatrix - Kotlin, REST, Retrofit, Firestore

- Deployed a layered data pipeline integrating the RxNorm and OpenFDA REST APIs through Retrofit, a Firestore-backed repository layer, and an MVVM ViewModel to surface real-time medication data.
- Developed a custom navigation architecture with the Android Navigation Component and a bottom navigation bar for a multi-screen medication-tracking flow.
- Solved real-time RFID/BLE scan latency by maintaining an in-memory cache keyed by RFID tag and populated via a Firestore snapshot listener, avoiding live database queries on every hardware scan event.
- Partnered with a teammate under faculty advisement to scope, construct, and pitch a finished product, producing a GitHub README, flow diagrams, and stakeholder pitch materials.

AI Assistant/Companion - Kotlin, Ollama, OpenRouter, Room DB

- Built a local-first LLM chat application running inference through Ollama on local GPU hardware, with OpenRouter as a cloud fallback for reliability.
- Implemented a Room-backed persistence layer with a streaming chat UI and a multi-layer memory system - prompt assembly, a fact-extraction pipeline, and chapter summarization - to maintain long-term context across sessions.
- Debugged a multi-stage LLM output pipeline end-to-end, isolating a model response-validation failure during the fact-extraction stage.

Networked Chat Server | C++, TCP/UDP

- Built a multi-client chat server from scratch, resolving message-framing asymmetry and TCP coalescing issues to guarantee reliable message delivery.
- Implemented UDP broadcast-based auto discovery so clients could automatically find active services on a network.
